

Vetri PinTrack

User-Friendly Improvement Ideas

Prepared for product and project discussion

Date: 02 May 2026

1. Goal

The goal is to make Vetri PinTrack simple for daily users: clear dashboard, fast bill payment, useful reminders, safe payment communication, and easy financial tracking.

2. Best User-Friendly Options

Feature Area	Improvement Idea	Why It Helps Users
Onboarding	Show progress like Step 2 of 6, autosave each step, and allow Skip/Continue Later.	Reduces confusion and prevents users from losing data.
Dashboard	Add quick action buttons: Add Bill, Add Expense, Add Income, Pay Bill.	Users can complete important tasks faster.
Bills	Show bills by status: Due Today, Due Soon, Overdue, Paid, Failed.	Users immediately know what needs attention.
Payments	Show a payment timeline: Created, Redirected, Pending, Success, Failed.	Users feel confident during PhonePe payment flow.
Reminders	Allow reminders by email, SMS, WhatsApp, or in-app notification.	Users can choose the channel they actually check.
Budgets	Show progress bars for each budget with 50%, 80%, and 100% alerts.	Users can control spending before crossing limits.
Reports	Add monthly PDF and CSV reports for bills, expenses, income, and payments.	Users can share reports or keep records.
Receipts	Create a receipt center with paid bill receipts and download option.	Users can easily find payment proof.
Support	Add payment issue reporting with support ticket/reference number.	Users know what to do when payment fails or stays pending.
Accessibility	Use readable font sizes, strong contrast, clear error messages, and mobile-first forms.	More users can use the product comfortably.

3. High-Impact Ideas for First Release

- **Smart empty states:** If there are no bills, show Add Your First Bill instead of a blank area.
- **Payment safety message:** Before redirecting to PhonePe, clearly say that Vetri PinTrack will never ask for UPI PIN, OTP, CVV, or card PIN.
- **Retry payment:** If a payment fails, show Retry Payment and Contact Support options.
- **Due reminder preferences:** Let users choose reminders 7 days before, 3 days before, due date, and overdue.
- **Monthly insight cards:** Show simple messages such as You saved 18% this month or Bills increased by Rs. 500.
- **Mobile-friendly Pay Now:** Keep bill details, amount, and Pay Now button visible and easy to tap on mobile.

- **Receipt download:** After successful payment, provide Download Receipt and Back to Dashboard buttons.
- **Trust section:** Explain what data is stored, what is masked, and what is never stored.

4. Recommended Implementation Order

- First: quick actions, empty states, clean bill statuses, and payment timeline.
- Second: reminder preferences, receipt center, and budget progress bars.
- Third: monthly reports, spending insights, support tickets, and advanced notifications.
